

OVERALL ARCHITECTURE

Multi-Tenant Dealer Website Platform

DealerSite Pro powers onboarding, dashboards, inventory, public dealer websites, leads, payments, reviews, domains, and deployment from one shared SaaS application.

One App, Many Dealer Sites

Dashboard and public websites are served by a single Next.js codebase.

Supabase as Core Backend

Auth, PostgreSQL data, row-level security, and image storage live in Supabase.

Integrations Around the Core

Razorpay, Vercel, Cloudflare, Cyepro API, Sentry, Upstash, Git and GitHub.

1. System Purpose

DealerSite Pro is a multi-tenant SaaS platform for vehicle dealerships. Dealers can onboard, configure a website, add inventory, manage leads, connect domains, accept bookings or payments, and publish a public website without maintaining a separate codebase per dealer.

2. High-Level Architecture

3. Core Modules

Auth & Dealer Account

Supabase Auth manages users. Dealer records are linked to authenticated users and protected through ownership checks and RLS.

Onboarding

Collects vehicle category, dealership profile, brands, services, website style, images, domains, and inventory source.

Dashboard

Operational control center for inventory, model cards, leads, messages, reviews, analytics, webpage editing, and settings.

Public Dealer Website

Resolves dealer by slug or domain, fetches live configuration, and renders the selected template with inventory and lead CTAs.

Inventory

Supports manual add, bulk CSV upload, uploaded images, Cyepro inventory sync, and catalog-backed new vehicle pages.

Domains & Deployment

Supports free subdomains, custom domains, DNS verification, Vercel domain registration, and Cloudflare automation.

4. Main Request Flows

Dashboard Save Flow

- Dealer opens dashboard page.
- Next.js loads state and fetches dealer data from Supabase.
- User edits inventory, website design, model cards, or settings.
- API/client write validates dealer ownership.
- Supabase updates data and public pages render latest data.

Public Website Flow

- Customer visits slug or custom domain.
- App resolves dealer and site configuration.
- Inventory comes from manual stock, Cyepro, or static catalog.
- Selected template renders the public website.
- Lead, call, WhatsApp, test drive, and booking actions are tracked.

5. Data Model

TABLE / AREA	PURPOSE
dealers	Main dealer profile, slug, contact details, template selection, vehicle segment flags, onboarding status.
dealer_brands	Brands sold by the dealer, including primary brand and vehicle type mapping.
dealer_services	Services enabled on public websites such as finance, exchange, service booking, insurance, and test drives.
dealer_template_configs	Main website copy and operational configuration: hero title, subtitle, CTA, social URLs, working hours.
dealer_site_configs	Brand-specific template overrides for multi-OEM dealer websites.
vehicles / vehicle_photos	Manual and bulk-uploaded four-wheeler stock plus linked photos for cards and detail pages.
tw_vehicles / tw_used_vehicles	Two-wheeler new and used inventory.
thw_vehicles / thw_used_vehicles	Three-wheeler new and used inventory.
leads / messages / reviews	Customer communication, inquiry tracking, and review visibility.
domains / domain_onboardings	Free subdomains, custom domain setup, DNS verification, and propagation status.
payments / subscriptions / webhook_events	Razorpay payment flows and idempotent webhook processing.

6. Technology Stack

7. Security, Reliability, and Operations

8. Deployment Architecture

Supabase remains the shared backend across deployments, while public sites are resolved dynamically by slug or domain.

9. Summary

The system is designed as a single multi-tenant SaaS application. The same Next.js codebase powers onboarding, dealer operations, and public dealer websites. Supabase is the source of truth for identity, data, and assets. External services such as Razorpay, Vercel, Cloudflare, Cyepro, Sentry, Upstash, Git, and GitHub provide payments, deployment, domains, inventory integration, monitoring, protection, and engineering workflow.
